CLAY
Closing the Loop Along with the Youth

Hello again!

Project CLAY has steadily progressed! Despite Corona and the holidays in schools and universities we have successfully managed to collect all required answers (220 for each partner country) for finalizing our Circular Behaviour Index!

Thanks again to all survey participants, multipliers and experts involved, who actively contributed to CLAY!!!

We are currently analyzing the final results and will publish them on the [project website](#) and on [Facebook](#) shortly! So stay tuned!

Next steps:

Development of digital training materials
We are currently developing the content for the 5 digital training modules (Linear Economy, Circular Economy, Circular Design, Circular Strategies and Circular policies, programs and initiatives.

The lead partner of this IO, ProEduca, developed a framework for the partners to create and develop their respective modules. Each module will consist of several learning units; each unit will have specific learning outcomes and include self-

Next steps (continued)

ProEduca will create modules 1 and 2 on Linear and Circular Economy, **bit management** will create module 3 on Circular Design, **SBTC** will create module 4 on Circular Strategies, and **Training2000** will create module 5 on Circular policies, programs and initiatives.

The materials will then be turned into H5P e-learnings. By the end of September, we will have the pilot versions ready, test them internally, and then it's up to you! We depend on your feedback to create the best possible e-learnings to support circular economy among young people!
Half time

CLAY started in February 2020, right when things became interesting. After 12 months of virtual cooperation, it is also time to conduct an internal evaluation. All partners will develop internal progress reports and **bit** will develop an internal interim report and conduct a quality audit.

The project partners are in regular exchange via all virtual means and are participating in monthly online meetings to assess the progress of the project and discuss next steps.
We have adapted to the virtual work environment successfully, and CLAY makes good progress! And we're happy to have a new project team member: Emma Brösel joined **bit** and will support in the content development and project management!

CLAY Snapshot

Covid made it tricky for all of us: Finding experts and participants to support the development of IO2 was much harder than in "normal" times. On the upside, we are now all very familiar with tools like ZOOM, MS Teams, and effective virtual cooperation.

But fingers crossed: Depending on the developments regarding Covid, we might yet be able to meet in person before the project successfully closes!
