

CLAY

Closing the Loop
Along with
the Youth

Project progress

We hope this newsletter finds you well and you have enjoyed summer!

A lot has happened since our last newsletter in April!

After the **Circular Behaviour Index** had been **finalized**, the CLAY team fully focused on **developing** the CLAY training materials.

In our 3rd virtual TPM before the summer holidays on 13.07.2021, we **finalized** the **training content** and decided on a **new tool** for creating the **digital training materials**: **Articulate Rise**.

With this tool, we can create **more interactivity** and we will also offer the **digital training materials** as **downloads** for **LMS** (Learning Management System) **integration** to include and use learner tracking!

bit and ProEduca have updated and quality checked the digital materials and guide documents for learners, teachers and trainers over summer, and all partners have pilot tested the English version internally.

By the **end of September**, the **English version** of all training materials was **updated** and **finalized**.

Next steps

With our **next virtual TPM** on **29th of September**, we have **finalized the English version** and **kicked-off translation and go-live** of the English version - it will be **online** (via project website/OER platform,) **by the end of October 2021**.

In **parallel**, we start **translating** to the partner languages **German, Italian, Czech and Turkish**. We will **pilot test the national versions** in November and December to assure a **going live** of the **final CLAY training program** in all national language versions in **January 2022**!

Final quarter

Project CLAY will reach its **end in January 2022**. Despite the ongoing **COVID-19 pandemic** and a trying summer in all partner countries (e.g. weather extremes, fires), we are sure to **finalize CLAY on time**.

At the same time, **climate change** is becoming an **increasingly important topic** for **politics, policy makers** - and **all of us**! This clearly **highlights the importance of training young people** on the concept of **circular economy** and **boosts our motivation** to cover the final steps towards achieving a **positive impact** with our **project results**!
